

PolyAndro-7 *with Persona for Android*

A dynamic text-to-speech device for people on the go.

PolyAndro-7 is the ultimate lightweight, portable solution for literate users on the go. It is a brilliant Android tablet with **Persona for Android** that provides you with clear text-to-speech voice output, and a number of speed enhancements so you can get your thoughts out quickly.

Persona for Android is a voice output communication program that is easily customized to help you get your message across in almost any situation. Prepare for upcoming conversations by storing phrases in your own categories. Use the word prediction to finish words you start to type. And the forward facing section of the display is perfect for holding your place in the conversation or clarifying your meaning to the listener.

ZYGO Wireless Voice Amplifier

The brand new **ZYGO Wireless Voice Amplifier** uses an adaptive 2.4GHz digital technology with an auto-pairing system to push sound from the clip-on lapel microphone to a remote 12 watt speaker, resulting in loud, clear, high quality voice amplification.

Use the removable clip to attach the **Wireless Voice Amplifier** to your belt so the sound projects forwards, or set the speaker farther away so that it is easy for your listeners to hear. The speaker can be placed up to 65 feet away!

This system comes with the wireless clip-on lapel microphone as well as a wired headset microphone.

Software Updates

PapooTouch update to v. 3.1

There are three important updates to the **PapooTouch** in version 3.1. There is now a TTS editor to allow for speech exceptions. The Grid Player has been updated and it includes speech exceptions to allow you to define word pronunciations. With the Notebook app, you can save lists of messages to be spoken quickly.

The **Allora 2** is elegantly designed for face-to-face communication! The *detachable display/speaker* can be worn around the neck on a lanyard, or give it to someone to read the message, place it in the middle of the table for a meeting or at the restaurant, or adhere it to the back of the car headrest for the back seat passenger to read.

RealSpeak is available in several languages, and you can put more than one on board. The **Allora 2** can change languages with a few keystrokes to accommodate multi-lingual settings. No additional hardware is needed. For example, you might want voices for American English and American Spanish and go between them at will.

Allora 2 by jabblo

Features of the Allora 2:

- Detachable, repositionable display/speaker
- Dual displays, one forward facing
- RealSpeak natural sounding speech
- Dual Speakers for loud sound
